/note="Wettor: pBluescriptSK-; Site 1: EcoRI; Site 2:
XhoI; Unidirectional cloning. EcoRI side has T3 primer and predominantly 5' reads. T7 primer on XhoI side of insert.
Nitrogen starvation library. Cells were inoculated into minimal medium and grown for two days with shaking (150 rpm) at room temperature. Culture was harvested, blended, inoculated into minimal medium as above for 24 h. Cells were harvested, washed with water and inoculated into minimal medium base lacking nitrogen source for 6 h. Sequences were processed by one of two methods. Where a full-length alignment to the M. grisea genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredbhrap version 991019 and trimmed according to phd files (0.05) and for vector seqs."

Al 3D11 Heterobasidion annosum infection stage cDNA library
Heterobasidion annosum cDNA clone Al 3D11 similar to putative 5.85
ribosomal RNA protein [Arabidopsis thaliana], mRNA sequence.
                                                                                                                                                                                                                                                                                                                       3 AAATGCGATAAGTAATGTGAATTGCAGAATTCAGTGAATCATCGAATCTTTGAACGCAC

The cDNA library was constructed from 1 ug of total RNA using the SMART cDNA synthesis kit (Clontech, Palo Alto, CA, USA) according to the manufacturer's instructions. The resulting cDNA was packed into lambda phages using the Giappack III Gold packaging kit (Stratagene, La Jolla, CA). The pTriplEx2 phagenid clones in Escherichia choli were obtained by the contained by the contained to the contained by the contained to the contained by the contained by the contained to the contai

The cDNA library was constructed from 1 ug of total RNA using the SMART cDNA synthesis kit (Clontech, Palo Alto, CA, USA) according to the manufacturer's instructions. The resulting cDNA was packed into lambda phages using the Gigapack III Gold packaging kit (Stratagene, La Jolla, CA). The pTriplEx2 phagemid clones in Escherichia choli were obtained by using the mass in vivo excision protocol according to the manufacturer's instructions (Clontech)."
country=Italy; common name= anther smut; synonym=Ustilago violacea; Chromosome-specific bands were gel-isolated from electrophoretic karyotypes, triple digested (RsaI, MscI, and DraI), size-fractionated by electrophoresis for fragments between 200 to 1000 bp, cloned, and sequenced."

AAV59029

gramin

The present sequence represents an internal transcribed spacer 2 (1782) and adjacent regions. Probes can be derived from the present sequence which are specific. The specification also describes 1782 sequence-derived probes for identifying a species selected from

Claim 1; species.

Page

12; 45pp; English.

New nucleic acid probes for filamentous fungi - for detecting e.g. Aspergillus, Fusarium, Mucor, Rhizopus, Rhizomucor, Absidia, Cunninghamella, Pseudoallescheria boydii, Penicillium and Sporothr

Sporothrix

WPI; 1999-034737/03.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a genomic DNA sequence containing the 18S rRNA gene, internal transcribed spacer regions I and 2 (ITS1, ITS2) and 5.8S rRNA sequences from a mutant strain of Gibberella fukikoroi (LTB-1027) of the invention. This region of DNA is highly variable and can be used for species and strain differentiation. The LTB-1027 mutant produces a mixture of gibberellins which is at least 70 % GA 4 and GA 7. Gibberellins GA 4 and GA 7 promotte flowering and fruit cell elongation, and are used by growers of apples, pears and grapes to produce larger fruits and earlier harveste. The mixture of GA 3, GA 4 and GA 7 achieved using the method of this invention should be particularly useful in the apple industry where GA 4 has been found more effective in russet control and in promoting fruit set. This methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A new method for producing a mixture of gibberellins from fujikuroi results in high titers of GA4 and GA7 useful to flowering and fruit growth in the fruit growing industry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2293 BP; 596 A; 527 C; 592 G;

The methods ar primers are useful for identifying fungal isolates of fungal pathogens and monitoring of disease development in plant populations. The present sequence represents an internal transcribed spacer RNA encoding sequence.

                                                                                                                                                                                  밁
                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                      The invention relates to novel steroid compounds derived from the African soil fungus Fusarium sp. WF6381 (ATCC 7448) which act as inhibitors of CHIV integrase. The invention encompasses cultures of Fusarium sp. MF6381. The invention also relates to a composition comprising a compound of the invention in combination with an AIDS antiviral agent, an immunomodulator and an antiinfective agent. The compounds of the invention may be used in the inhibition of HIV integrase and in the prevention and treatment of HIV infection. A wide range of state of HIV infection may be treated: AIDS (acquired immunodeficiency syndrome); ARC (AIDS related complex); both symptomatic and asymptomatic HIV infection; and actual or potential exposure to HIV. The compounds may be used to isolate HIV integrase mutants which are potentially useful as screening tools for antiviral compounds. The compounds may also be used to establish or determine the site at which other antivirals bind to HIV integrase (e.g., by DNA (rDNA) internal transcribed spacer (ITS) region of Fusarium sp. Composition of fusarium sp. wf6381, which may be used to characterise MF6381. (Opdated on 15-SEP-2003 to standardise OS field)

06-JAN-1999
                                                                      This sequence represents an internal transcribed spacer (ITS) sequence of the invention. The primer pairs, based on the ITS sequences, are used for the PCR amplification detection of wheat Microdochium and Fusarium fungal pathogens, especially M. nivale, F. graminearum, F. culmorum, F. avenaceum, F. poae, F. moniliforme or F. roseum. The two different strains of fungi show different symptoms during infection, which may or may not be due to infection. Early identification of the strain causing the infection allows early, and more specific fungicidal treatment. (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                          of t

                                                                                                   The invention relates to a novel base sequence which is part of defined ribosome ribonucleic acid (rRNA) gene of Cordyceps crace. The base sequences can be used for the classification of Cordy sinensis. The sequence represents a C. sinensis rRNA sequence.

                                                                                                                                                                  The invention relates to a novel base sequence which is part of a fully defined ribosome ribonucleic acid (rRNA) gene of Cordyceps crassispora. The base sequences can be used for the classification of Cordyceps sinensis. The sequence represents a C. crassispora rRNA sequence of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                     The present sequence represents an internal transcribed spacer 2 (ITS2) and adjacent regions. Probes can be derived from the present sequence which are species-specific. The specification also describes ITS2 sequence-derived probes for identifying a species selected from Aspergillus flavus, A. funigatus, A. niger, A. terreus, A. nidulans, P. moniliforme, Mucor rouxii, M. racemosus, M. plumbeus, M. circinalloides f. circinelloides, Rhizopus oryzae, R. microsporus, R. circinans, R. stolonifer, Rhizomucor pusillus, Absidia corymbifera, Cunninghamella elegans, Pseudallesheria boydii (teleomorph of Scedosporium appiospermum), Pennicillum notatum, or Sporothrix schenkii. The probes can be used for differentiating filamentous fungal species from each other and from other medically important fungi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            M. circinilloides f. circinelloides; китгория отделення, ка circinans; R. stolonifer; Rhizomucor pusillus; Absidia corymbifera; Cunninghamella elegans; Pseudallesheria boydii; Scedosporium apiospermum; Penicillium notatum; Sporothrix schenkii; filamentous fungus; вв.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid probes for filamentous fungi - for detecting e.g. Aspergillus, Fusarium, Mucor, Rhizopus, Rhizomucor, Absidia, Cunninghamella, Pseudoallescheria boydii, Penicillium and Sporothrix
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            02-MAY-1997;

                     This invention relates to the detection of a fungal pathogen comprising isolating DNA from a plant leaf infected with a pathogen. The methods and primers are useful for identifying fungal isolates of fungal pathogens and monitoring of disease development in plant populations. The present sequence represents an internal transcribed spacer RNA encoding sequence
                                                                                                                             Detecting a fungal pathogen, useful i comprises subjecting the DNA to PCR a primer having sequence identity with of Fusarium spp.

This invention relates to the detection of a fungal pathogen comprising isolating DNA from a plant leaf infected with a pathogen. The methods ar primers are useful for identifying fungal isolates of fungal pathogens and monitoring of disease development in plant populations. The present sequence represents an internal transcribed spacer RNA encoding sequence.

                                                                   Sequence
                                                                                                                             The invention relates to a novel base sequence which is part of a fully defined ribosome ribonucleic acid (rkNA) gene of Cordyceps crassispora. The base sequences can be used for the classification of Cordyceps sinensis. The sequence represents a C. sinensis rRNA sequence of the
                                                                                                                                                                                                                                                                                                                                                   WPI; 2002-639075/69.

The Trichoderma fungi, alone or in combination, are used as gene Crecipients to increase activity of the formulation as a biological control against diseases of plants and plant material and CC control agent against diseases of plants and plant material and CC diological entities causing biodeterioration, and as a biolixiviation CC (leaching) agent. It is particularly used e.g. in agriculture, forestry CC and gardening; for controlling microorganisms which damage food and its CC packaging, construction materials, raw materials and manufactured CC packaging, construction materials, raw materials and manufactured CC one type of T. viride over other soil fungi makes them useful for control CC of plant diseases. Use of this formulation allows reduced application of CC polluting chemical pesticides and is thus more eco-friendly. (Updated on CC 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The invention provides a DNA molecule isolated from the ribosomal RNA (rRNA) gene region of a fungal pathogen, where the DNA molecule consists of an ITS sequence selected from ITS1 and ITS2 of Fusarium culmorum, Fusarium graminearum, Fusarium moniliforme, Septoria avenae or Microdochicum nivale. A method for detecting F. graminearum, F. culmorum, F. moniliforme, F. poae, F. avenaceum and M. nivale isolates is also provided. The method comprises isolating DNA from a plant leaf infected with at least one of the above pathogens and amplifying parts of the ITS sequence of the pathogen(s) by PCR using specific primers from within these sequences. The pathogen(s) are detected by visualising the amplified part of the ITS sequence
                                                                                                                                                                                                                                                                                                                                                                                    Sequence 546 BP; 150 A; 140 C; 125 G; 131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA isolated from fungal RNA, and its internal transcribed spacer sequence - used for detecting fungal pathogens in plant tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19-APR-1995;
